MAIN TITLE

SAFETY IN THE MINE

Produced by Ford Motion Picture Laboratories
Released through Vitaphone & M. Grey
Copyrighted 1921 by Ford Motor Company

SUB TITLES

1. Deep down in the bowels of the earth a body of brave men are risking their lives daily that iron, copper, zinc, lead, coal, etc., may be dumped at our doors of present day necessity.
2. Within recent years a vigorous effort started itself to lessen the hazards lurking in these vast ~~mining~~ caverns. First Aid classes are taught to dress injuries of various descriptions.
3. Dressing for a simple thigh fracture.
4. Artificial respiration.
5. An uplift of mankind.
6. Ever see a First Aid Packet with its "Sterile Compress" and "Triangular Bandages?"
7. Tying a "Square Knot."
8. The "Cranny Knot."
9. One bright morning, not so long ago, a crew of happy miners descended to their work.
10. Thoughtlessly one of their number walks by a danger sign and into some gas which his light ignites.
11. Explosion, smoke and gas, suffocation --- each miner understands fully their effect and hurriedly builds for himself a stopping to seal off the smoke.
12. Overhead the call for aid is quickly responded to.
13. The canary bird is used for the detection of carbon monoxide gas.
14. Behind his barricade is found a gas victim. An oxygen breathing apparatus revives him.
15. Accidents are occurring frequently enough to keep First Aid in demand. A miner working under dangerous slate roof refuses to heed his "buddy's" warning.
16. All that these miners have learned about First Aid is brought into play.
17. Our big cities and our giant industries are fighting constantly to place Safety First uppermost in everyone's mind, just as the miner down deep in the ground struggles to attain the same ideal.
